

*Mihai Draganescu, Gheorghe Stefan, Corneliu Burileanu,*

## **FUNCTIONAL ELECTRONICS**

**(in romanian), Bucharest, Editura Tehnica, 1991.**

# **Contents of the chapters written by *M.Draganescu***

### **CHAPTER 1**

#### **INTRODUCTION**

1.1 Definitions of Technology

1.2 Electronics

1.3 The general diagram function-structure

1.4 Points of view on functional electronics

1.5 The "functions" of functional electronics

Notes and references

### **CHAPTER II**

#### **FUNDAMENTAL PROBLEMS OF ELECTRONICS**

2.1 Introduction

2.2 Signals

2.3 Signals and noise. Heffner's theorem

- 2.4 Can we speak of phenomenological signals?
- 2.5 The problem of information
- 2.6 Shannonian information
- 2.7 The minimum energy per transmitted bit
- 2.8 Information in computers. The maximum capacity of storage of information by a physical system
- 2.9 The theorem and the limit of Bremermann
- 2.10 Minimum energy for processing information
- 2.11 Algorithmic information
- 2.12 Algorithmic information after Chaitin
- 2.13 Is it possible a general theory of information?
- 2.14 A proposal for a general theory of information
- 2.15 The problems of information in contemporary conditions

Notes and references

## **CHAPTER III**

### **STRUCTURAL LIMITS, COMPLEXITY**

- 3.1 The question of structures
- 3.2 The limits of electronic and informatic structures
- 3.3 Fundamental limits
- 3.4 Device limits
- 3.5 Circuit and system limits
- 3.6 Technological limits
- 3.7 The contemporary structures of electronics
- 3.8 Becoming structures

### 3.8.1 GaAs integrated circuits

- 3.8.2 Band-gap engineering
- 3.8.3 Integrated optics
- 3.8.4 Optoelectronics
- 3.8.5 Vacuum-field transistors
- 3.8.6 Superconductor microelectronics
- 3.8.7 Quantum devices

### 3.9 Complexity

### 3.10 Measures of the descriptive complexity

### 3.11 Computational complexity

### 3.12 An energetic evaluation of the computational complexity

Notes and references

## **CHAPTER IV**

### **FORMAL SYSTEMS**

#### 4.1 Introduction

#### 4.2 What is formal

#### 4.3 Formal systems

#### 4.4 The problem of definition of a formal system

#### 4.5 Classical definition of a formal system

#### 4.6 Examples of syntactic formal systems

#### 4.7 Definite and indefinite formal systems

#### 4.8 The reduction of a formal system; some types of formal systems

#### 4.9 Final commentaries

Notes and references

## **CHAPTER VI**

### **SEMANTIC SYSTEMS AND NATURAL LANGUAGE**

- 6.1 Semantics and semantic systems
- 6.2 Linguistical semantics
- 6.3 Linguistic theories
- 6.4 Points of view concerning the natural language
- Notes and references

## **CHAPTER VIII**

### **FUNCTIONS, ARCHITECTURES AND OBJECTS**

- 8.1 Introduction
- 8.2 The notion of function
- 8.3 Mathematical functions and formal functions
- 8.4 Software as formal functions
- 8.5 Functional interactions
- 8.6 Other types of functions than those of formal functions
- 8.7 The notion of operator
- 8.8 Architecture
- 8.9 Objects
- 8.10 Sintactic automata with finite memory
- 8.11 Sintactic automata with unbounded memory
- 8.12 Semantic automata
- 8.13 Simple organisms
- 8.14 Complex organisms
- 8.15 Archems and social archems
- Notes and references

## CHAPTER IX

### MOLECULAR ELECTRONICS

9.1 Perspectives of bioelectronic and molecular electronics

9.2 Points of view on the molecular electronics

9.3 Semiconductor and conductor polymers

9.4 Langmuir-Blodgett films

9.5 The use of the molecules of biological type

9.6 Molecular engineering

9.7 Protein engineering

9.8 The role of nucleic acids

9.9 A theory of the living cell as an abstract organism

- 9.9.1 Principles of abstracts organisms
- 9.9.2 The cell as an abstract organism
- 9.9.3 The implications of the molecules of Conrad type
- 9.9.4 Semantics of the cell
- 9.9.5 The inverse process: from the phenomenological towards the structural
- 9.9.6 The architecture of the cell
- 9.9.7 The interactions of the cell as an abstract organism

Notes and references

**NOTE.** The chapters 4 (Formal systems), 5 (Information), and 7 (Structures) are written by *Gheorghe Stefan*. The chapters 10 ( The function of speech) and 11 (Voice signal processing procedures) are written by *Corneliu Burileanu*.
